

Project Title:

Quality Info Record (QIR) Setup for a Vendor in SAP QM

Purpose of the Project

This project demonstrates the **end-to-end configuration and execution** of a *Quality Info Record (QIR)* for a vendor in **SAP Quality Management (QM)**. It is designed to showcase hands-on SAP QM functional expertise without any programming.

A QIR ensures that materials are procured only from quality-approved vendors by enforcing:

- Supplier quality agreements
- Inspection activation at Goods Receipt

This repository contains step-by-step documentation, datasets, to help beginners and SAP learners understand how QIR works in real business scenarios.

SAP Modules Involved

- SAP QM
- SAP MM
- SAP Procurement

Business Scenario

A company wants to procure raw materials only from vendors who follow quality standards.

QIR ensures:

- Vendor must submit quality certificates
- Material GR triggers inspection lot
